PERFORMANCE RECORDED
POLL HEREFORD BULLS

Field Day, Monday, 6th February, 2017

AT STUD YARDS
MORGANVALE, WILLALOOKA S.A.
PMB 45 KEITH 5267

www.morganvalebeef.com.au

SALE INFORMATION

Inspection

All cattle available for inspection from 9.30am on morning of sale, inspection can be arranged before hand by appointment.

Delivery

Free delivery provided it is coordinated by the vendor. While every care is taken no responsibility can be accepted whilst awaiting delivery.

Health

All Morganvale cattle are officially government confirmed as TB free, Brucellosis free.

The property has a beef only status for Bovine Johnes Disease.

All cattle are EU accredited Ear notched tested negative for Pestivirus

Accommodation

The vendors will be pleased to arrange accommodation in Keith, Bordertown or Naracoorte at the many and varied accommodation types available.

Insurance

Can be arranged for transit and/or periods up to 12 months.

Representation will be in attendance on sale day.

Rebate

A rebate of 5% will be allowed by the vendors to interstate agents (other than interstate representatives of selling agents) and South Australian Associated agents on any purchase they influence, provided that they advise the selling agent in writing and make settlement giving the names of the purchasers not later than twelve (12) hours prior to the sale.

Disclaimer

The owners, employees, sale staff and representatives accept no liability for accidents that occur. Any person attending does so at their own risk.

Morganvale Poll Herefords Welcome you to their On-Property Bull Sale

We take this opportunity to invite you to our 11th annual on-property sale. We appreciate the support from past and new clients over the past nine sales with your purchases and positive comments. The sale will be held at the Stud Yards at Morganvale once again. A new format for us in the sale being a video auction will be used. The bulls will remain in the display pens with a video of each lot displayed while being auctioned.

This year's sale offering displays the type we are striving for – a mid-maturity, easy finishing animal which will fit both the domestic and export specifications.

This year's sale draft features progeny from 11 sires used in 2014. These bulls show the consistency of type we are now seeing from our dedicated breeding goals. The large sire battery ensures there is enough variance of type to be able to satisfy producers with different breeding objectives, self replacing herds to terminal herds. The offering shows increased uniformity as heifers join the breeding herd from our disciplined breeding program. All females are culled for feet, udders, temperament and fertility. From a large number of cows only the top 30% of bulls make it to our sales.

The sale bulls feature the first sons from Allendale Anzac H175, Yalgoo Busker H243, Braybook Gunshot G480, Morganvale Hampton along with proven home bred sires in Fillmore, Forsyth, Flynn and the last progeny of R.Ramsey who all breed the carcass traits we are striving for, plus maintaining the bred traits Poll Herefords are noted for.

We believe these sires give clients a variation in type and blood lines but also consistency and profitability.

During S.A. Beef Field Days, on Monday 6th February, the on property sale bulls, 7 bulls reserved for the Wodonga sale in May and a draft of spring 2015 unjoined keeper heifers will be available for your viewing. We trust you will be able to come and enjoy our sale day and hope we can assist you in making your selection.

Allan & Heather Morgan

BREEDPLAN EXPLANATION

EBV's are provided for the following traits...

SS Scrotal size is an indicator of male fertility in regards to semen quality and quantity. SS is also positively associated with female fertility.

Birth Weight The lower the birthweight EBV, the lighter is the birthweight potential of the progeny.

Genetic Milk Reflects extra calf weight at weaning due to the genetic influence a sire has on his daughters milking and mothering ability.

200 Day Weight Indicates the relative weight advantage of a sire at 8-10 months of age.

400 Day Weight Indicates the relative weight advantage of a sire at yearling age.

600 Day Weight The best single estimate of an animals genetic merit for growth beyond yearling age.

MWT Mature Cow Weight is an estimate of the genetic difference in cow weight at 5 years of age.

CWT Estimates the genetic difference in carcass weight and is adjusted to 650 days of age.

Fat Depth Bulls with negative (-) EBV's for this trait are expected to produce relatively leaner progeny than bulls with positive (+) EBV's.

EMA Bulls with positive (+) EBV's for this trait are expected to produce more muscular progeny than bulls with negative (-) EBV's.

Retail Beef Yield Bulls with larger EBV's are expected to produce progeny with higher yielding carcasses.

Intramuscular Fat % Positive EBV's indicate likelihood of more intramuscular fat.

Accuracies The accuracy provides a measure of the reliability of the EBV. The higher the value, the less likelihood of the EBV changing with the addition of more performance records on the animal.

Selection Indexes An index ranks an animal for single production goal - profit. They take the hard work out of knowing how much emphasis to give each of the available growth, maternal, carcass and fertility EBV's when selecting parent animals. An index is a composite EBV of traits best suited to a particular production system and target market.

Supermarket Index Targeting the domestic supermarket trade. Steers are either finished on grass or grain (eg 50-70 days). Steers are assumed marketed at 450kg live weight (250kg HSCW and 12mm P8 fat depth) at 17 months of age. Daughters are retained for breeding. In response to industry feedback regarding eating quality and tenderness, a small premium has been placed on marbling.

Grass Fed Targeting pastured finished steers. Steers are assumed marketed at 600kg live weight (330kg HSCW and 8mm P8 fat depth) at 23 months of age. Daughters are retained for breeding. In response to industry feedback regarding eating quality and tenderness, a small premium has been placed on marbling.

Grain Fed Targeting pastured grown steers with a 125 day feedlot finishing period for the grain fed markets. Steers are assumed marketed at 600kg live weight (330kg HSCW and 20mm P8 fat) at 20 months of age. Daughters are retained for breeding. There is a significant premium if steers reach a marble score of 2 or greater.

EU Index Targeting pastured finished steers for the EU market. Steers are assumed marketed at 620kg live weight (340kg HSCW and 14mm P8 fat depth) at 24 months of age. Daughters are retained for breeding. There is no marbling requirement.

BREEDING OBJECTIVES

Morganvale's breeding objective is to breed bulls that are fully described and have genetics and physical ability to meet market specifications and client's breeding objectives. A balance is required where the herd is self replacing with a high fertility and efficiency of the female portion being critical.

Strategies to achieve this objective

- All cattle run under commercial conditions
- A moderate birth weight with optimum growth, carcase quality and muscularity that meet market specifications
- Performance test to accurately describe the cattle genetic merit whilst maintaining structural soundness.

PERFORMANCE POINTERS \$ INDEX

These indexes are designed to allow balanced selection for various market end points. This technology applies various weightings to the potential 17 EBV's now available to give a single value for an animal to your breeding objective in dollar terms. They rank animals for a simple goal - **profit**.

They apportion the amount of selection pressure that needs to be applied for growth, maternal, carcase and fertility traits to give you the most profitable herd. High indexing animals will rarely have the highest EBV for any single trait. The weightings depend on the economic importance of traits and for antagonisms between traits.

BIRTH WEIGHT: BULLS FOR YOUR HEIFER PROGRAM-H

At Morganvale we weigh and record all calves at birth. You will notice that a number of sires marked with an H, this indicates we consider this sire suitable for a heifer joining program. This came from not only a structural observation but a Breedplan EBV and natural birth weight that incorporates all of the sire's contemporaries. Many other studs in our industry don't weigh calves. They claim a bull with a low performance (600 day growth) will also have a low birth weight – this is not the case. We strive for low to moderate birth and increased growth weights.

For an overview of the Breedplan EBV performance see page 4.

COMPARING BULLS

The logic of genetic improvement is that selection decisions are based on differences – in reality it is not how different bulls appear to be but how different their progeny will be that is important.

How you measure the differences dictates how much genetic improvement you make

- Visual Assessment - tells you what you think is there
- Scans - tells you what is there, but not how it got there
- EBV's - tells you how much of what's there will be passed onto the progeny
