REBATE

3% Rebate to outside Agents introducing buyers in writing 12 hours prior to Sale.

SALE INFORMATION

Inspection

All cattle available for inspection from 9.00am on morning of sale, inspection can be arranged before hand by appointment.

Sale Format

The sale will be conducted as a open cry video sale -extra time prior to the sale in making selections is recommended.

Delivery

Free delivery provided it is coordinated by the vendor on bulls . Freight on heifers is purcharers responsibility. While every care is taken no responsibility can be accepted whilst awaiting delivery.

Health

All Morganvale cattle are officially government confirmed as TB free, Brucellosis free. The property has a J-BAS score 6 for Bovine Johnes Disease. All cattle are EU accredited Tested negative for Pestivirus. All Bulls have been semen tested in January 2026. All Heifers pregnancy tested Lots 40–135 PTIC on 29-11-2025. Lots 136– 158 to be confirmed refer to supplementary sheet for status.

Accommodation

The vendors will be pleased to arrange accommodation in Keith, Bordertown or Naracoorte at the many and varied accommodation types available.

Insurance

Can be arranged for transit and/or periods up to 12 months. Representation will be in attendance on sale day.

Rebate

A rebate of 3% will be allowed by the vendors to interstate agents (other than interstate representatives of selling agents) and South Australian Associated agents on any purchase they influence, provided that they advise the selling agent in writing and make settlement giving the names of the purchasers not later than twelve (12) hours prior to the sale.

Disclaimer

The owners, employees, sale staff and representatives accept no liability for accidents that occur. Any person attending does so at their own risk.

Morganvale Welcome

you to their On-Property Sale

We take this opportunity to invite you to our annual on-property sale which is significant as we reach our 20th sale. We will be offering our draft of bulls and PTIC heifers in an open cry auction from 11.30 am interfaced with Auctionsplus.

After the last two roller coaster seasons we have decided to rebalance our operation and to offer the entire drop of retained PTIC heifers. This gives all breeders a chance to select females from all our sire and dam lines to suit their objectives. All heifers are foetal aged to give buyers a guide to calving dates to fit their programs along with genomics which includes 100 snp genotype, sire verification, horn/poll, 4 genetic conditions and bvdv free. The three joining sires are proven suitable for heifer joining having been used at least twice with great success and reflected in their ebv's and have generations of heifer joining sires in their pedigrees.

The bull offering features the first sons of Injemira Robert Redford S139, Yavenvale Sylvester S422— both heifer joining specialists— Morganvale Statesman S100 and Morganvale Seymour S163 both breeding well in our herd. They join our proven sires who all offer carcase improving traits. We believe these sires give clients a variation in type and blood lines but also consistency and profitability. The sale catalogue is available on the sale pages of Herefords Australia web site with videos of sale lots on Auctionsplus and our site from late January.

We look forward to presenting these cattle to you at our field day as part of beef week Monday 9th February and on sale day Tuesday 24th February or any other time which suits.

If we can assist in any way please don't hesitate to contact us.

We hope you enjoy browsing this catalogue and are sure you will enjoy inspecting the cattle in person even more.

Kind Regards,

Allan & Heather Morgan

0408 859 953

BREEDPLAN EXPLANATION

SS	Scrotal size is an indicator of male fertility in regards to semen quality and quantity. SS is also positively associated with female fertility.
Birth Weight	The lower the birthweight EBV, the lighter is the birthweight potential of the progeny.
Genetic Milk	Reflects extra calf weight at weaning due to the genetic influence a sire has on his daughters milking and mothering ability.
200 Day Weight	Indicates the relative weight advantage of a sire at 8-10 months of age.
400 Day Weight	Indicates the relative weight advantage of a sire at yearling age.
600 Day Weight	The best single estimate of an animals genetic merit for growth beyond yearling age.
MWT	Mature Cow Weight is an estimate of the genetic difference in cow weight at 5 years of age.
CWT	Estimates the genetic difference in carcase weight and is adjusted to 650 days of age.
Fat Depth	Bulls with negative (-) EBV's for this trait are expected to produce relatively leaner progeny than bulls with positive (+) EBV's.
EMA	Bulls with positive (+) EBV's for this trait are expected to produce more muscular progeny than bulls with negative (-) EBV's.
Retail Beef Yield	Bulls with larger EBV's are expected to produce progeny with higher yielding carcasses.
Intramuscular Fat %	Positive EBV's indicate likelihood of more intramuscular fat.
Accuracies	The accuracy provides a measure of the reliability of the EBV. The higher the value, the less likelihood of the EBV changing with the addition of more performance records on the animal.
Selection Indexes	An index ranks an animal for single production goal - profit. They take the hard work out of knowing how much emphasis to give each of the available growth, maternal, carcase and fertility EBV's when selecting parent animals. An index is a composite EBV of traits best suited to a particular production system and target market.

Best Practice Guide to Animal Selection Using Australian Hereford Selection Indexes

Incorporating selection index information into breeding decisions takes the hard work out of trying to decide how much emphasis you need to put on individual EBVs when determining which animals you want to retain in your herd or purchase. The recommended strategy for selecting animals is to complete the following steps:

1. Identify the selection index of most relevance to your or your client's breeding objectives. This decision should be aided by the index descriptions at the end of this document.
2. Rank animals on the chosen selection index. This can be done via the web search facility available for the breed.
3. Consider the individual BREEDPLAN EBVs of importance. All breed level selection indexes are designed for the average of the production system specified in their description. This means that individual farm environments and management choices may require that their own thresholds are applied. For example, if looking for a bull to use over heifers, particular attention should be paid to Calving Ease and Birth Weight EBVs.
4. Consider other traits of importance. Structure, fertility (e.g. BULLCHECK™), temperament, genetic conditions and pedigree are all important additional considerations.

Further information is available in the A BREEDPLAN Guide to Animal Selection tip sheet that can be found in the Help Centre on the BREEDPLAN website.

Available Australian Hereford Selection Indexes

Herefords Australia Ltd. currently reports two different selection indexes. These are the:

- Sustainability Production Index
- MSA Production Index

These indexes take a balanced approach and apply selection pressure to all trait categories that impact on productivity, quality of product and cost of production. Importantly both indexes have a focus on sustainable beef production which is achieved through improving the efficiency of the production system, as well as improving eating quality. Significant premiums are applied for increasing marble score up to a marble score of 3. Pressure is also applied to early life growth to maintain low ossification scores and good MSA compliance.

In addition, each selection index targets the following specifications.

Sustainability Production Index

- Commercial self-replacing Hereford herd targeting the domestic market and with a strong focus on sustainability.
- Selected heifers are retained so maternal traits are important.
- Steers finished on grass.
- Steers target 300 kg carcasses with 10 mm P8 fat depth at 20 months of age.

MSA Production Index

- Commercial self-replacing Hereford herd targeting the domestic market.
- Selected heifers are retained so maternal traits are important.
- Steers grain finished in feedlot and target higher MSA grades.
- Steers target 340 kg carcasses with 12 mm P8 fat depth at 20 months of age.

BREEDING OBJECTIVES

Morganvale's breeding objective is to breed bulls that are fully described and have genetics and physical ability to meet market specifications and client's breeding objectives. A balance is required where the herd is self replacing with a high fertility and efficiency of the female portion being critical.

Strategies to achieve this objective

- All cattle run under commercial conditions
- A moderate birth weight with optimum growth, carcase quality and muscularity that meet market specifications
- Performance test to accurately describe the cattle genetic merit whilst maintaining structural soundness.

PERFORMANCE POINTERS \$ INDEX

These indexes are designed to allow balanced selection for various market end points. This technology applies various weightings to the potential 17 EBV's now available to give a single value for an animal to your breeding objective in dollar terms. They rank animals for a simple goal - **profit**.

They apportion the amount of selection pressure that needs to be applied for growth, maternal, carcase and fertility traits to give you the most profitable herd. High indexing animals will rarely have the highest EBV for any single trait. The weightings depend on the economic importance of traits and for antagonisms between traits.

BIRTH WEIGHT: BULLS FOR YOUR HEIFER PROGRAM-H

At Morganvale we weigh and record all calves at birth. You will notice that a number of sires marked with an H, this indicates we consider this sire suitable for a heifer joining program. This came from not only a structural observation but a Breedplan EBV and natural birth weight that incorporates all of the sire's contemporaries. Many other studs in our industry don't weigh calves. They claim a bull with a low performance (600 day growth) will also have a low birth weight – this is not the case. We strive for low to moderate birth and increased growth weights.

COMPARING BULLS

The logic of genetic improvement is that selection decisions are based on differences – in reality it is not how different bulls appear to be but how different their progeny will be that is important. How you measure the differences dictates how much genetic improvement you make

- Visual Assessment - tells you what you think is there
- Scans - tell you what is there, but not how it got there
- EBV's - tell you how much of what's there will be passed onto the progeny.
